

## Integrated Logistic Support

We also support the whole range of life-cycle processes and disciplines, from provision of Through Life Management (TLM) and Contractor Logistic Support (CLS) planning and support optimisation, including strategy formulation, implementation and management, to provision of traditional support optimisation elements:

- Project Management
- Obsolescence Management
- Risk Management
- Safety Management/Safety Case
- Integrated Logistic Support
- Supportability Engineering
- Reliability Centred Maintenance
- Availability, Reliability and Maintainability
- Spares Optimisation
- Technical Documentation
- Training and training material
- Probabilistic Modelling and Simulation
- Whole Life Cost Modelling

At RTP we are experts who focus on technical documentation and Integrated Logistic Support. It's all we do – taking the worry out of machinery and systems operation so you can enjoy more peace of mind.

## Please contact us today

Whatever your Technical Documentation or ILS requirement, we have the solution.

### Your documentation safety net

Who is holding the documentation safety net under *your* business?

We are, and here's how we do it...

## Who is holding the documentation safety net under your business?

What happens if poor equipment or systems documentation contributes to injury or damage? With people's safety and your reputation on the line, the quality of your Technical Documentation and Integrated Logistic Support (ILS) could be all that stands between costly liability litigation and a safe, profitable business. That's where Rheinmetall Technical Publications UK Ltd (RTP) can help – as your technical documentation safety net in an increasingly litigious world...

Peace of mind begins with the combination of autonomous operation and ultimate ownership by the international Rheinmetall AG group.

We are also the trusted strategic partner to major prime contractors that develop, support and maintain complex defence, civil aerospace and other equipment. Count on substantial Supportability Engineering, Technical Documentation and Training capability, over 40 years' experience and more than 240 highly-skilled authors, ILS engineers and support specialists. Their capabilities are the key to cost-effective end-to-end military and civil support.

## The benefits of working with us

Unlike many companies, we operate internationally, so you benefit from our capability with complex multinational programs – reinforced by our international partners and clients. And of course, when you harness the cost benefits of our carefully selected offshore service partners, it's always under the strictest management control.

You will also appreciate how we prove our performance through our, and our clients', sophisticated metrics. In a recent assessment by a major aerospace client, we received only Good and Excellent ratings for flexibility, reactivity, autonomy, innovation and production management. That's typical.

We will save you money (and help you make money) with fast, flexible delivery of scalable low-cost solutions.

Helping you do what you do best – our knowledge and experience frees you to concentrate on your business and add value for your customers.

Peace of mind – think of us as your safety net when lives, profitability, the environment and reputations are on the line.

From civil aircraft to submarine manuals and power generation, our breadth and depth of skills maximises the likelihood that we can provide the one-stop solution you need.

## Technical Documentation services

Do you prefer hard copy or Interactive Electronic Technical Publications (IETPs)? Either way, we will help you improve document quality and usability, and reduce costs – with Technical Authoring and Illustration that meets all current and future civilian and defence requirements. As members of the respected transnational Technical Publications Relations International (TPRI) consortium, we connect you to a dedicated team of Technical Authors, Editors, Illustrators, IPC Compilers and other professionals with wide-ranging experience:

- Operator & Maintenance Manuals
- Component Maintenance Manuals
- Repair & Overhaul Manuals
- User Manuals
- Service Bulletins
- Illustrated/Spare Parts Catalogues
- Technical translation
- Training material (including E-learning)

From one service bulletin to full sets of manuals, documentation can be created to all relevant specifications such as S1000D, AESPs, AXP 70, ATA 100 and ISpec 2200 specifications. Our authors regularly work within Integrated Supportability Engineering environments where data re-use is encouraged. Naturally, they also understand Supportability Engineering processes and the data types they can extract for re-use.
